## X2GO configuration for the Hands-On

- 1) Run X2GO Client
- 2) Create a new configuration by clicking the page icon

## 3) Fill:

- a. the name of the configuration
- b. the Hostname "nancepX.obs-nancay.fr" where X will be your allocated machine
- c. the login "guestrbfN" where N is your allocated number.
- d. the session Type: **XFCE**
- 4) Press "OK"

0		🧭 Sessi	on preferences -	hands-or	1	
Session name	Session e: hands-on	Connection	Input/Output	Media	Shared folders	
(it)	change icon					
Path: /						
Server						
Host: Login:	guestrbf1					
SSH port:	22					0
Kerbero	ion of GSSAPI credenti	ation als to the serve	r			
Session type	oxy server for SSH conn	lection				
XFCE			ommand:			
					OK	Cancel Defau

You can now select the configuration, and log into the machine with the password associated to your account.

## Fixing "tab" for autocompletion in terminal

There is a known bug with autocompletion in terminal. To fix it:

- 1 Open the Xfce Application Menu > Settings > Window Manager
- 2 Click on the **Keyboard** Tab
- 3 Clear the Switch window for same application setting

Autocompletion should work in terminal now.
